DONALD HJORTLAND, Pres.

EU REACH COMPLIANCE LETTER

Based upon a careful review of the guidelines of the European Union Registration, Evaluation, Authorization and Restriction of Chemicals (REACH) Regulation (EC 1907/2006) the products distributed by The Steel Supply Company meet the criteria of an “ARTICLE”. An “ARTICLE” is defined as an object which during production is given a special shape or surface which determines its function to a greater degree than does the chemical content.

Under Article 7(1), products that contain a substance that is intended to be released under normal or reasonably foreseeable conditions of use are required to be registered. As our products do not meet this criteria, registration is not required.

Under Article 7(2), products that contain a substance of very high concern in a concentration greater than .1% by weight require notification. As our products do not meet this criteria, notification is not required.

If you require additional information please direct questions to sales@steelsupply.com for a prompt answer. Thank you for your confidence in our products and your continuing patronage.
